

T13A BEAGLE Meeting Minutes

Date:9/10/21

Attendees: Krishen, Johnnie, Haokai, Dylan, Lawrence

Agenda Item: Going through test cases for function as well as additional project information, brainstorming ideas for functions, checking progress of members

Discussion/Conclusions:

- All route e.g. auth/login/v2 will be created on the server.py file, with helper functions (e.g. auth_login_v1) created in separate files and imported in.
- “Your implementation should build upon your work in iteration 1, and ideally your HTTP layer is just a wrapper for underlying functions you've written that handle the logic.”
- Update python libraries
 - pip3 install \$(curl <https://www.cse.unsw.edu.au/~cs1531/21T3/requirements.txt>)
- Update existing branches for v2 functions but create new branches for v1 functions
- python3 -m src.server
- If unable to write http tests, write the bulk of the function in a similar way to iteration 1 tests, where the http implementation will be a quick fix
- Messages in datastore to easily grab
-

Implementation Assumption:

- If the creator of a dm leaves using dm/leave/v1 and then uses dm/remove/v1, the dm is removed since they were the original creator
- Assumptions for admin/user/remove/v1:
 - Assuming a global owner can remove themselves
 - Behaviour of email/handle after user is removed

- Trying to auth_login removed user
- Behaviour of new handle if user is deleted (e.g. if handle and handle1 exist, does new handle become handle0)
